SYSTEM REQUIREMENTS

- PYTHON 3.X
- FLASK
- MYSQL SERVER
- MYSQL CONNECTOR FOR PYTHON
- WERKZEUG
- LOCAL WEB BROWSER
- WINDOWS PC OR ANY SYSTEM THAT SUPPORTS PYTHON AND MYSQL

SIMPLE MOVIE BOOKING FOR A BETTER THEATER EXPERIENCE

Booking movie tickets should be fast, clear, and reliable. Reel Deal helps customers browse movies, select showtimes, choose seats, and receive a ticket code after booking. It also gives staff a structured way to validate tickets, view bookings, and manage movie information.

The system focuses on common theater booking problems, including unclear seat availability, double booking, manual ticket tracking, and inefficient showtime management.

CORE FEATURES

- Customer and staff login
- Movie poster display
- Movie and showtime selection
- Visual seat map with available, selected, and reserved seats
- Multiple seats per booking
- Automatic ticket code generation
- Staff ticket validation
- Staff booking dashboard
- Staff movie, showtime, auditorium, and poster management

BOOKING MADE EASY

HOW REEL DEAL WORKS

Reel Deal uses a Flask web application connected to a MySQL database. Customers can log in, browse movies, select a showtime, choose one or more seats, and receive a ticket code. The system automatically saves each booking and updates seat availability so reserved seats cannot be selected again.

BOOKING PROCESS

1. Customer logs in to the system
2. Customer selects a movie and showtime
3. Customer chooses one or more available seats
4. The system saves the booking in MySQL
5. A ticket code is generated for the order
6. Selected seats are marked as reserved
7. Staff can validate the ticket at entry

BUSINESS VALUE

- Improves the customer booking experience
- Makes seat availability easier to understand
- Supports multiple seats in one order
- Helps prevent double booking
- Gives staff a way to validate tickets
- Keeps booking records organized in MySQL
- Supports staff management of movies, showtimes, auditoriums, and posters

FINAL SYSTEM FEATURES

Reel Deal is now a working movie ticket booking system with customer and staff workflows. Customers can browse movies, view posters, select showtimes, choose multiple seats, and receive a ticket code after booking. Staff users can validate tickets, view booking records, and add new movies with descriptions, showtimes, auditorium numbers, and poster images.

COMPLETED FEATURES

- Movie selection with poster display
- Showtime selection and scheduling
- Multi-seat reservation workflow
- Visual seat map with available, selected, and reserved seats
- Automatic ticket code generation
- Ticket validation functionality
- Staff booking dashboard
- Staff movie, showtime, auditorium, and poster management

PROJECT VALUE

Reel Deal provides a simple and reliable booking workflow for customers while giving staff tools to manage theater data. The system helps reduce double booking, keeps reservation records organized in MySQL, and makes the ticket process easier to understand from booking through validation.
