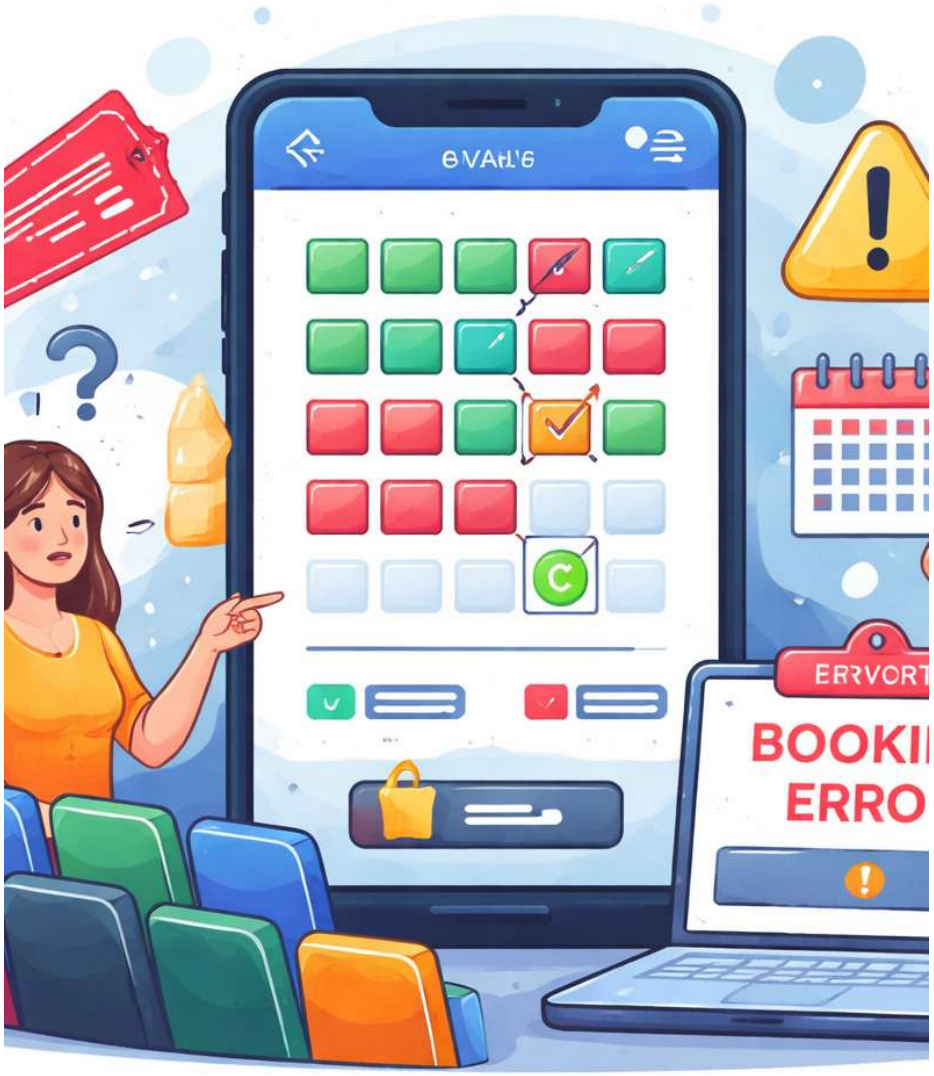
REEL DEAL MOVIE BOOKING SYSTEM

DREW BUSZ

MIDTERM PROJECT DEMO
MARCH 9, 2026



PROBLEM AND PURPOSE

- Movie ticket booking should be simple, clear, and reliable
- Users need an easy way to view available and reserved seats
- The system should reduce reservation errors and help prevent double booking
- Reel Deal is designed to support a structured, database-backed booking process

CURRENT MIDTERM IMPLEMENTATION

- User login with role-based access
- Seat availability display for a showtime
- Seat reservation using a Python and MySQL workflow
- Booking record stored in MySQL
- Seat status updated after reservation to prevent double booking

DEMO ROADMAP

- Demonstrate user login
- Display available seats for a showtime
- Reserve an available seat
- Show updated seat status
- Verify booking data in the database

FUTURE DEVELOPMENT

- Add movie selection and showtime selection features
- Add manager functions for maintaining movies and showtimes
- Expand the seat reservation workflow
- Improve the user-facing interface
- Continue developing Reel Deal into a more complete theater booking platform
