Product Overview

The Reel Deal is a Flask and MySQL movie ticket booking system with customer and staff workflows.

- **Customers browse movies, select showtimes, choose seats, and receive ticket codes**
- **Staff validate tickets, view bookings, and manage movies/showtimes**

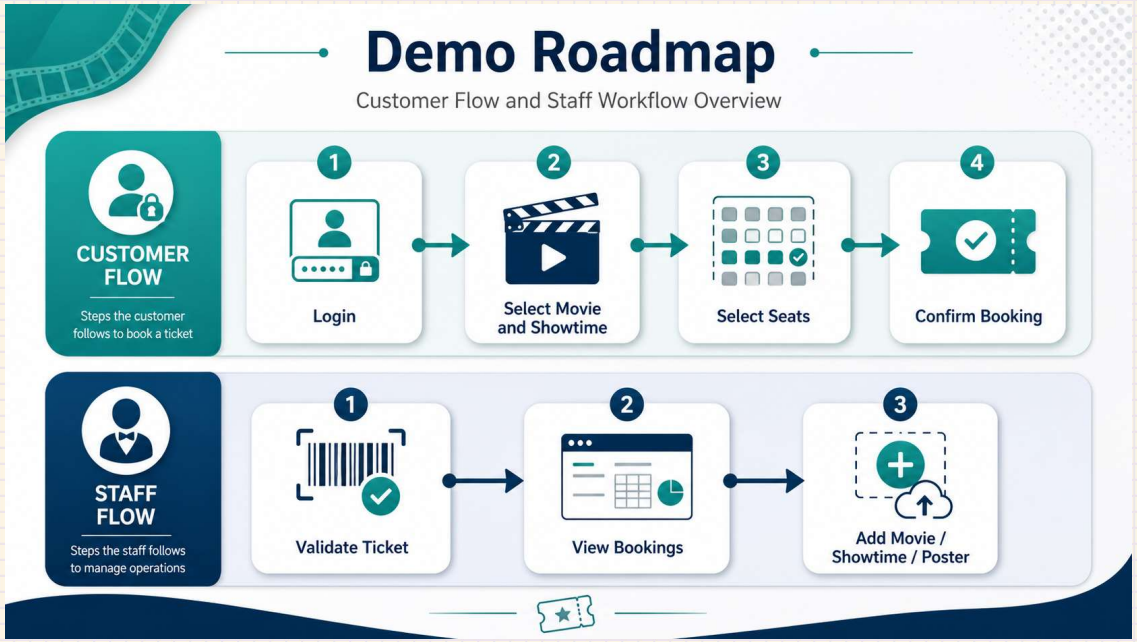
Demo Roadmap

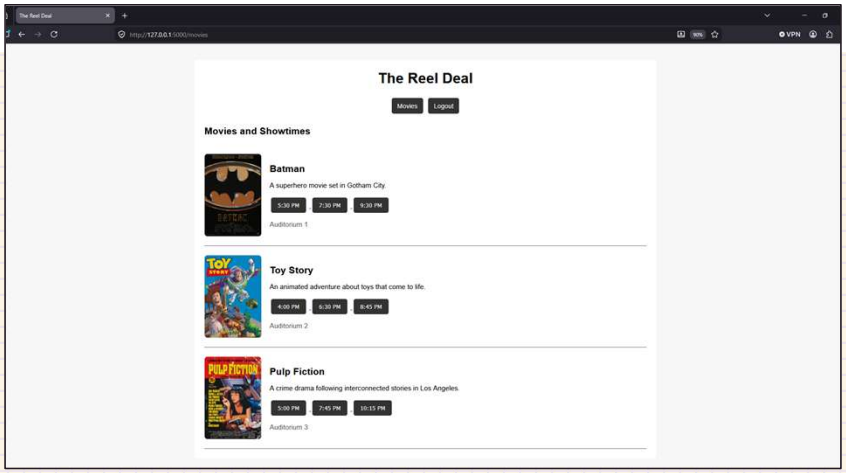
Customer Flow:

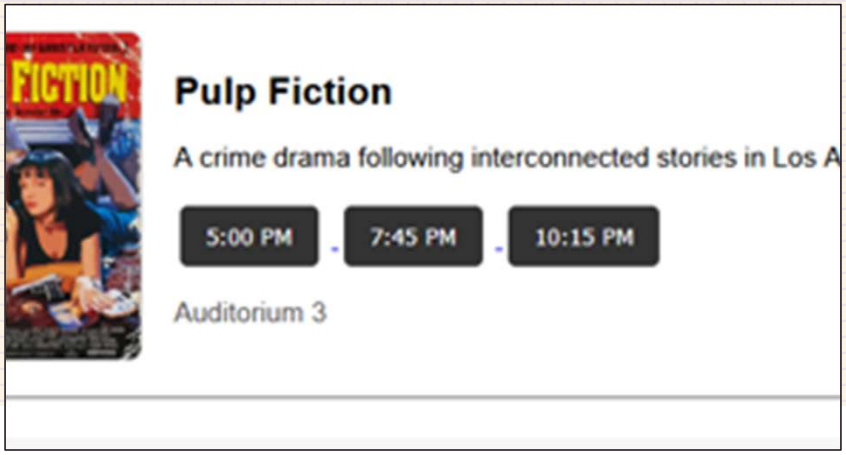
- Login
- Select movie and showtime
- Select seats
- Confirm booking

Staff Flow:

- Validate ticket
- View bookings
- Add movie/showtime/poster

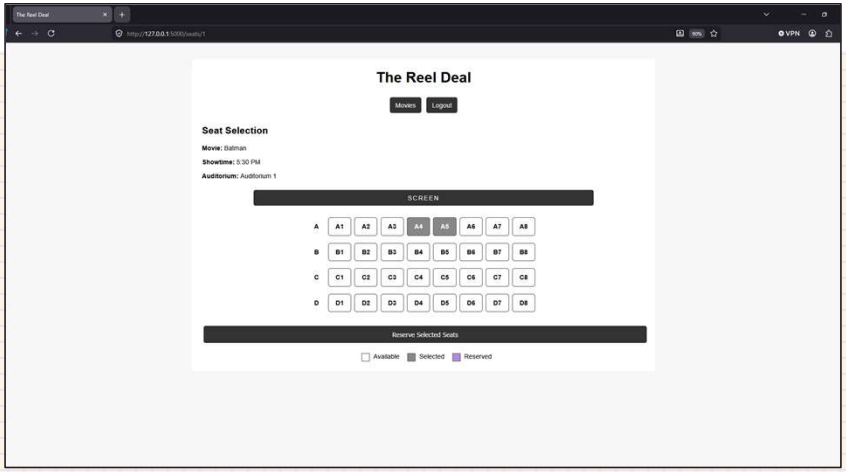


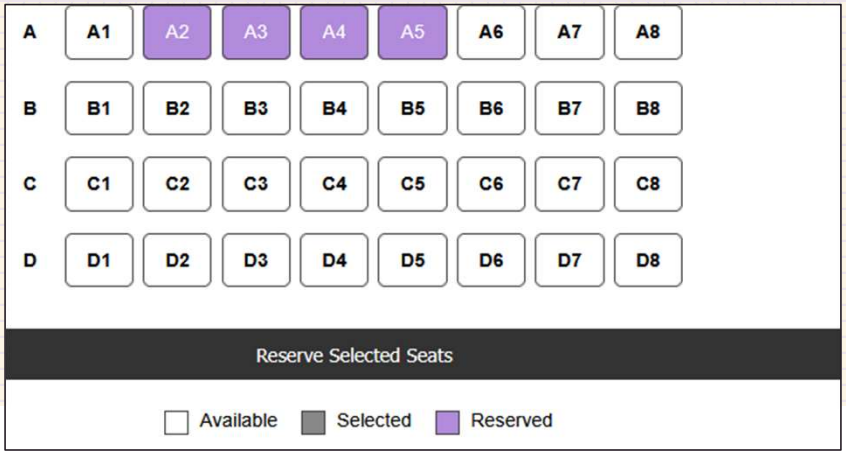




Customer Movie Selection

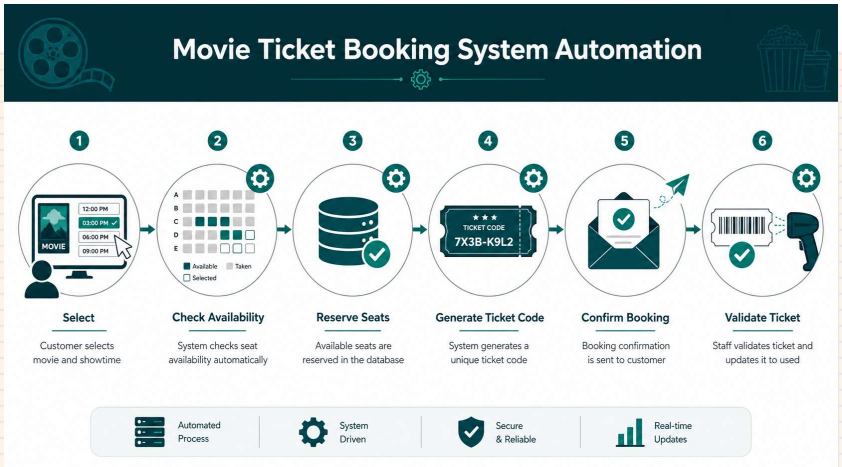
- Movies display with posters, descriptions, and showtime buttons
- Showtime data is pulled from MySQL
- Selecting a showtime opens the seat map

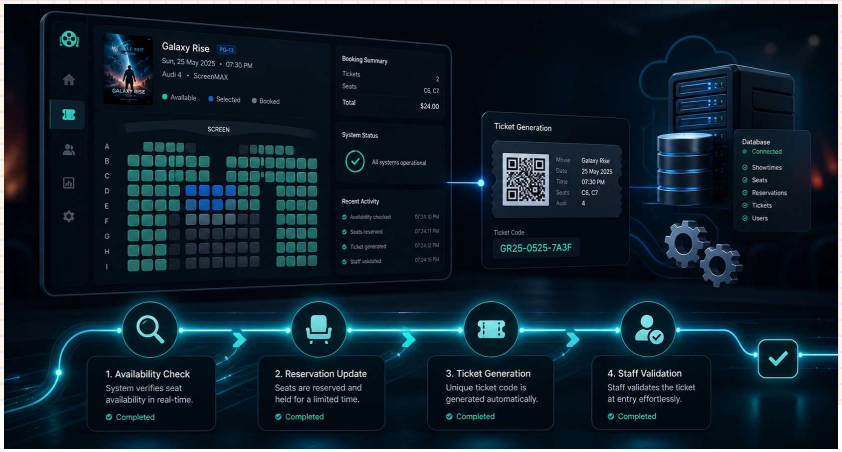




Seat Selection and Booking

- Seats are arranged in rows A-D and seats 1-8
- White = available
- Gray = selected
- Purple = reserved
- Multiple seats can be reserved in one order

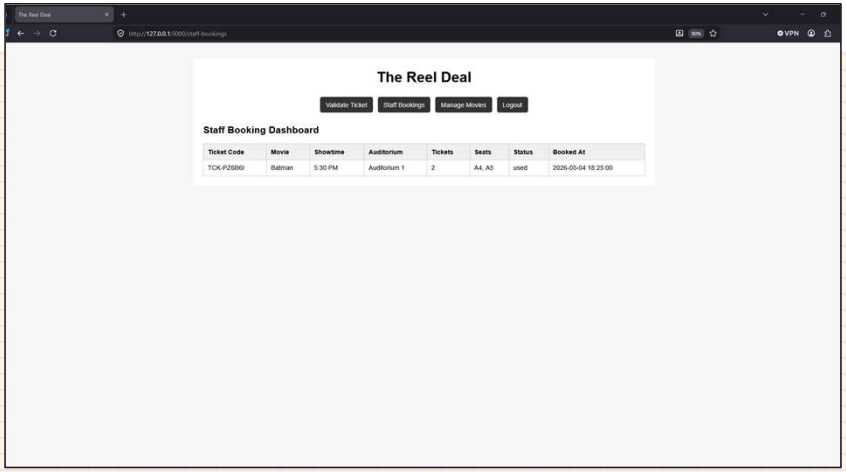


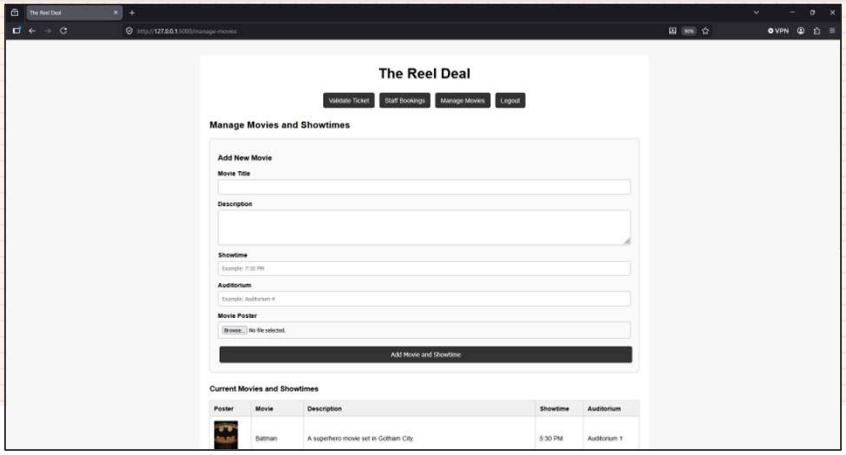


System Automation

The system automatically:

- **Checks seat availability**
- **Prevents double booking**
- **Generates a ticket code**
- **Saves booking records**
- **Updates selected seats to reserved**





Staff Features

- Validate ticket codes
- Mark tickets as used
- View booking dashboard
- Add movies, descriptions, showtimes, auditoriums, and posters
- Automatically create seats for new showtimes

System Design and Final Value

Main tables:

- **users**
- **movies**
- **showtimes**
- **seats**
- **bookings**

Final value:

The system provides a complete database-backed booking workflow from movie selection through staff ticket validation.
